

background study of external bremsstrahlung produced in the ALICE 3 setup

electron veto

09.09.2021

Goethe University Frankfurt

reminder: g4me detector setup for ALICE3-workshop

converter layer (vacuum)
 —> testing what enters FCT

beam pipe

12 tracker layers

10 end caps

one silicon layer (active device)
 —> currently a prerequisite for g4me to work

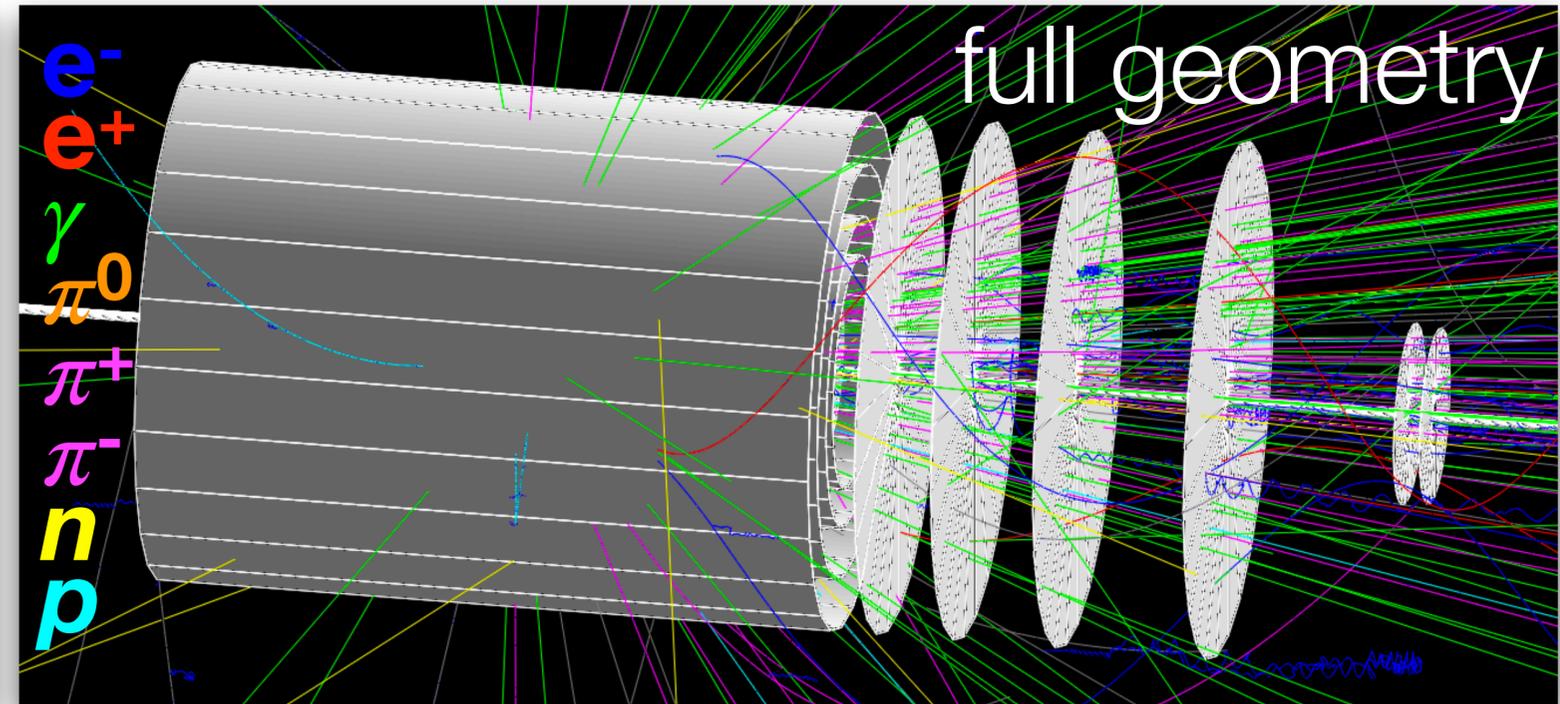

layer	radius (m)	length (m)	material (% X/X0)	resolution (um)
0	0.0050	2 x 0.15	0.1	2.5 (1.0?)
1	0.0120	2 x 0.15	0.1	2.5 (1.0?)
2	0.0250	2 x 0.15	0.1	2.5 (1.0?)
3	0.0375	2 x 0.62	0.1	2.5 (1.0?)
4	0.0700	2 x 0.62	1.0	10
5	0.1200	2 x 0.62	1.0	10
6	0.2000	2 x 0.62	1.0	10
7	0.3000	2 x 0.62	1.0	10
8	0.4500	2 x 1.32	1.0	10
9	0.6000	2 x 1.32	1.0	10
10	0.8000	2 x 1.32	1.0	10
11	1.0000	2 x 1.32	1.0	10

Table 2: Barrel geometry

disk	z (m)	R _i (m)	R _o (m)	material (% X/X0)	resolution (um)
0	0.16	0.005	0.03	1.0	10
1	0.20	0.005	0.03	1.0	10
2	0.24	0.005	0.03	1.0	10
3	0.77	0.005	0.35	1.0	10
4	1.00	0.005	0.35	1.0	10
5	1.22	0.005	0.35	1.0	10
6	1.50	0.005	1.00	1.0	10
7	1.80	0.005	1.00	1.0	10
8	2.20	0.005	1.00	1.0	10
9	2.79	0.005	1.00	1.0	10

Table 3: Endcap geometry

residual events after electron veto

$$3 < \eta < 5: 3530 / 20000 \approx 17.7\%$$

$$3 < \eta < 4: 4674 / 20000 \approx 23.4\%$$

$$4 < \eta < 5: 8885 / 20000 \approx 44.4\%$$

$$3 < \eta < 5: 1413 / 20000 \approx 7.1\%$$

$$3 < \eta < 4: 2115 / 20000 \approx 10.5\%$$

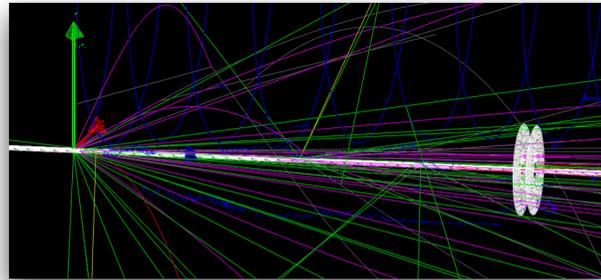

$$4 < \eta < 5: 6029 / 20000 \approx 30.1\%$$

on the following slides the background from external bremsstrahlung with and without electron veto is compared for the two scenarios (left: only beam pipe and right: full geometry) and for the three different pseudorapidity ranges

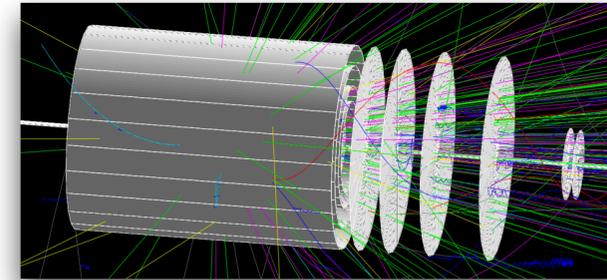

side note: the naming switches from soft photon expectation to inner Bremsstrahlung and to label in the plots the setup name “only beam pipe” / “full setup” was added

comparison of background for two scenarios:

1. only beam pipe

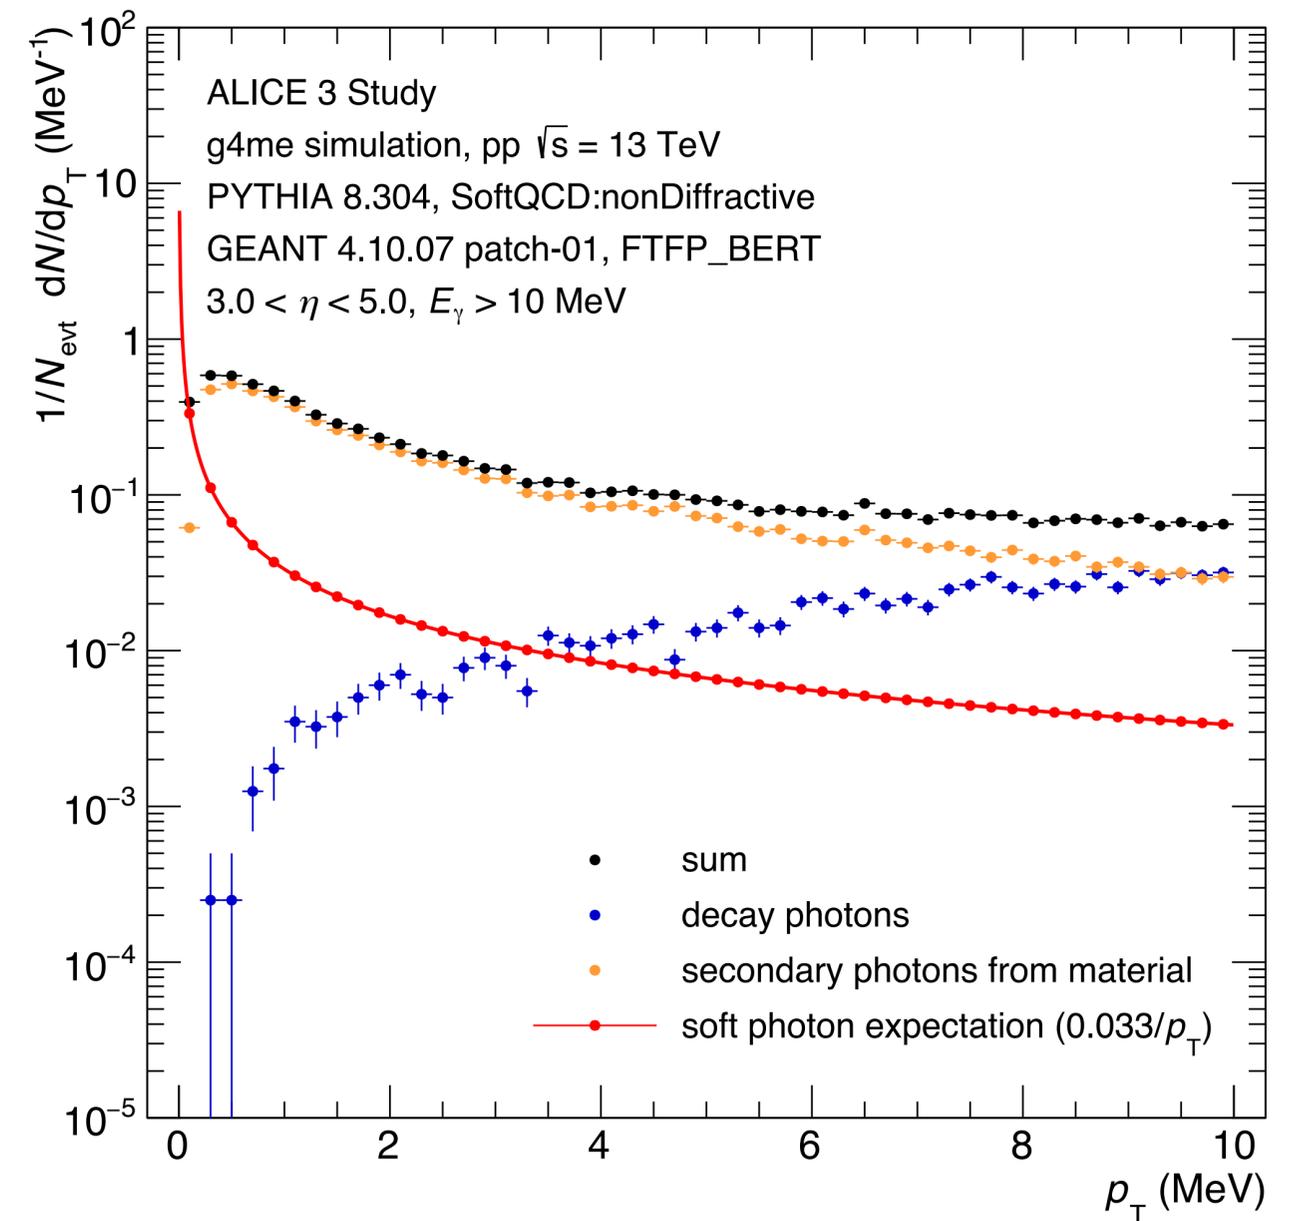

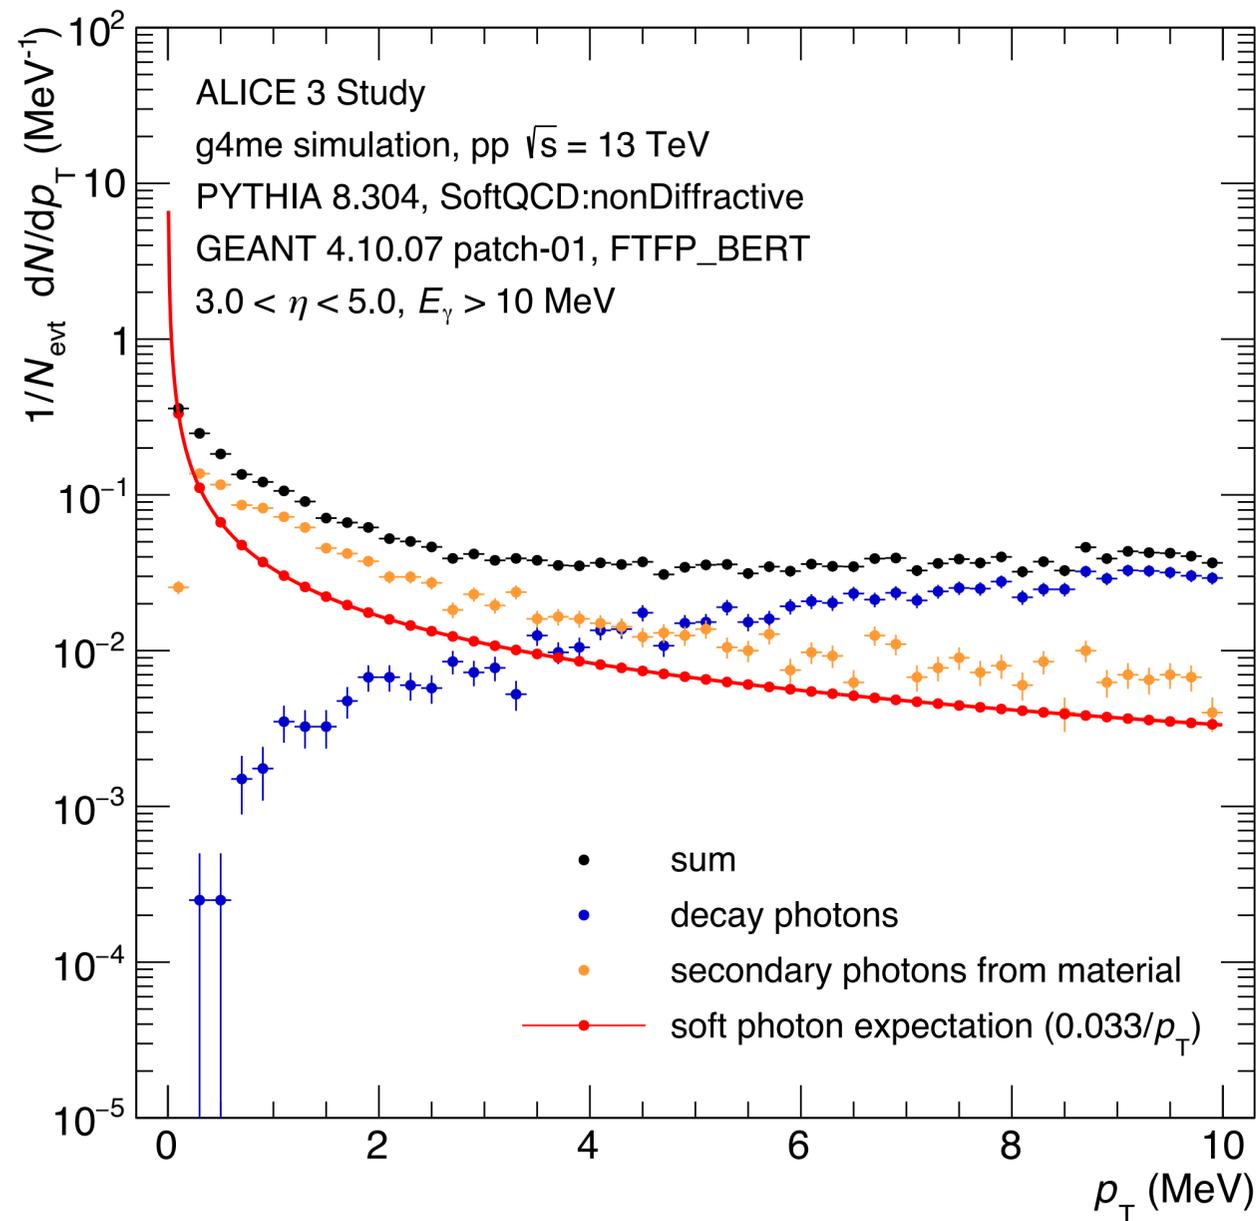

2. full geometry

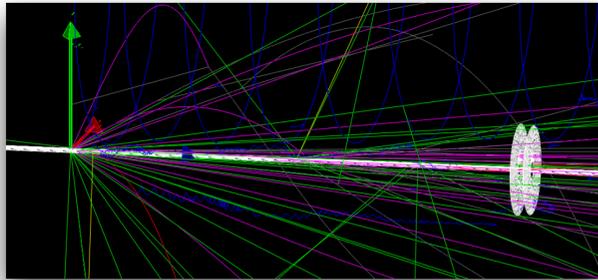

$3 < \eta < 5$

yield

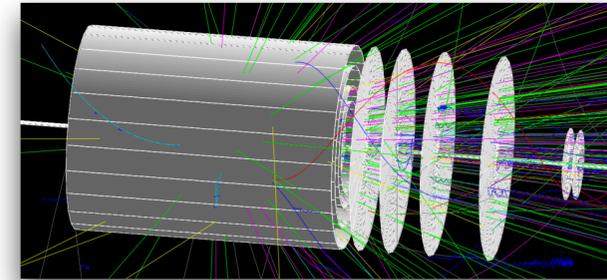

comparison of background for two scenarios:

1. only beam pipe

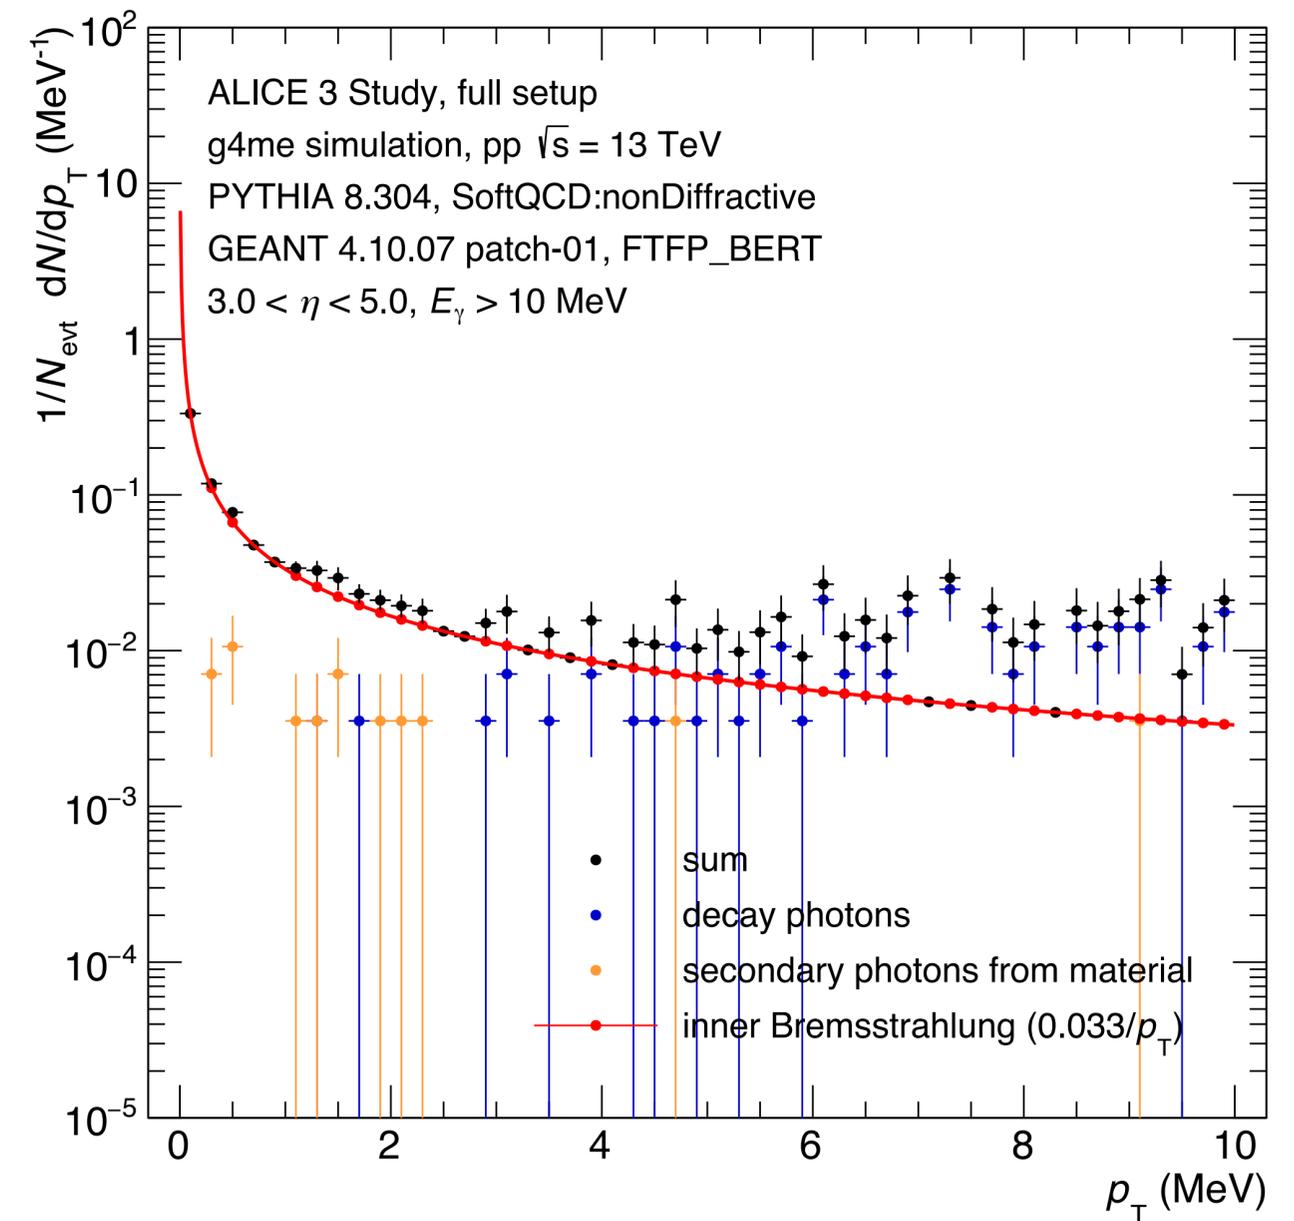

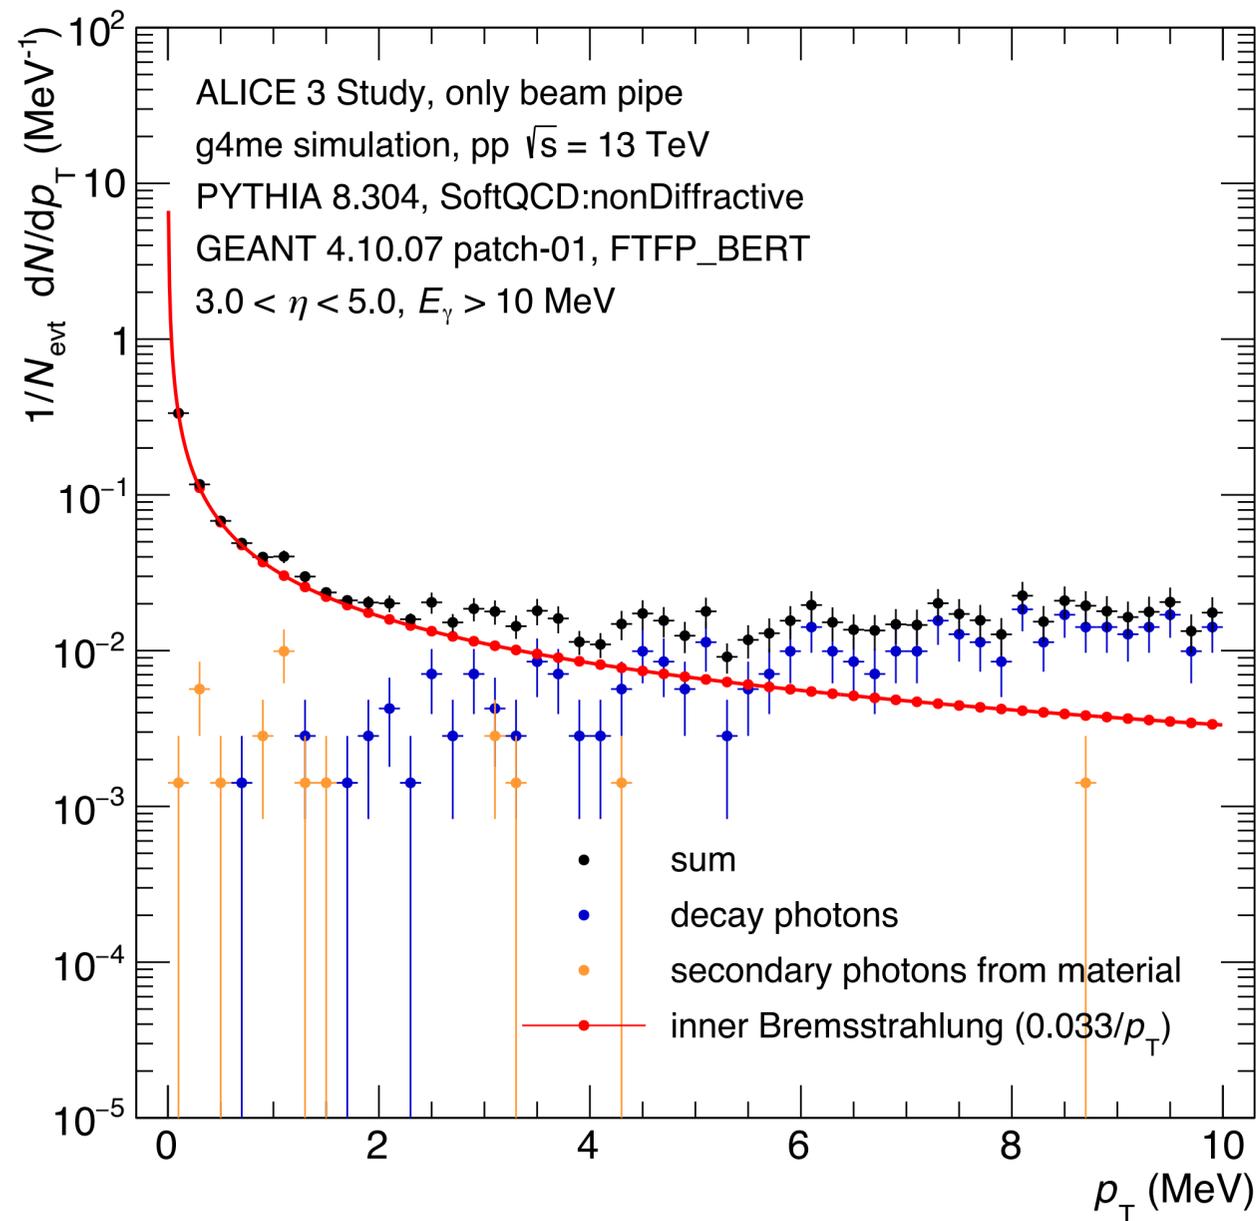

2. full geometry

$3 < \eta < 5$

yield

with
electron
veto

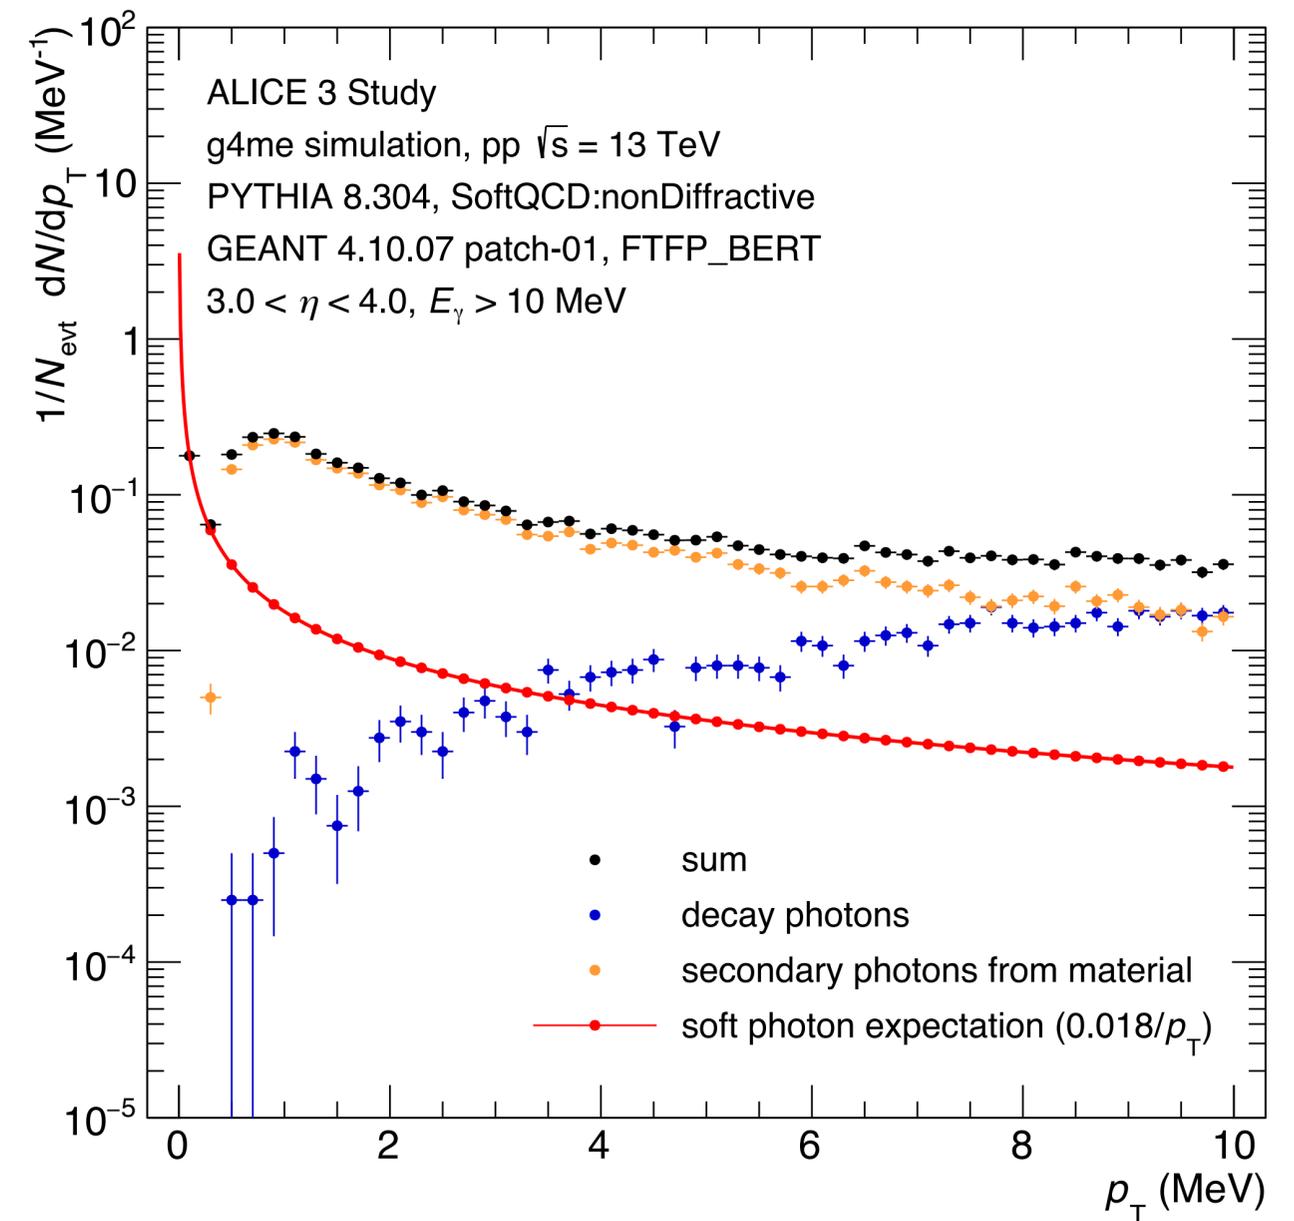

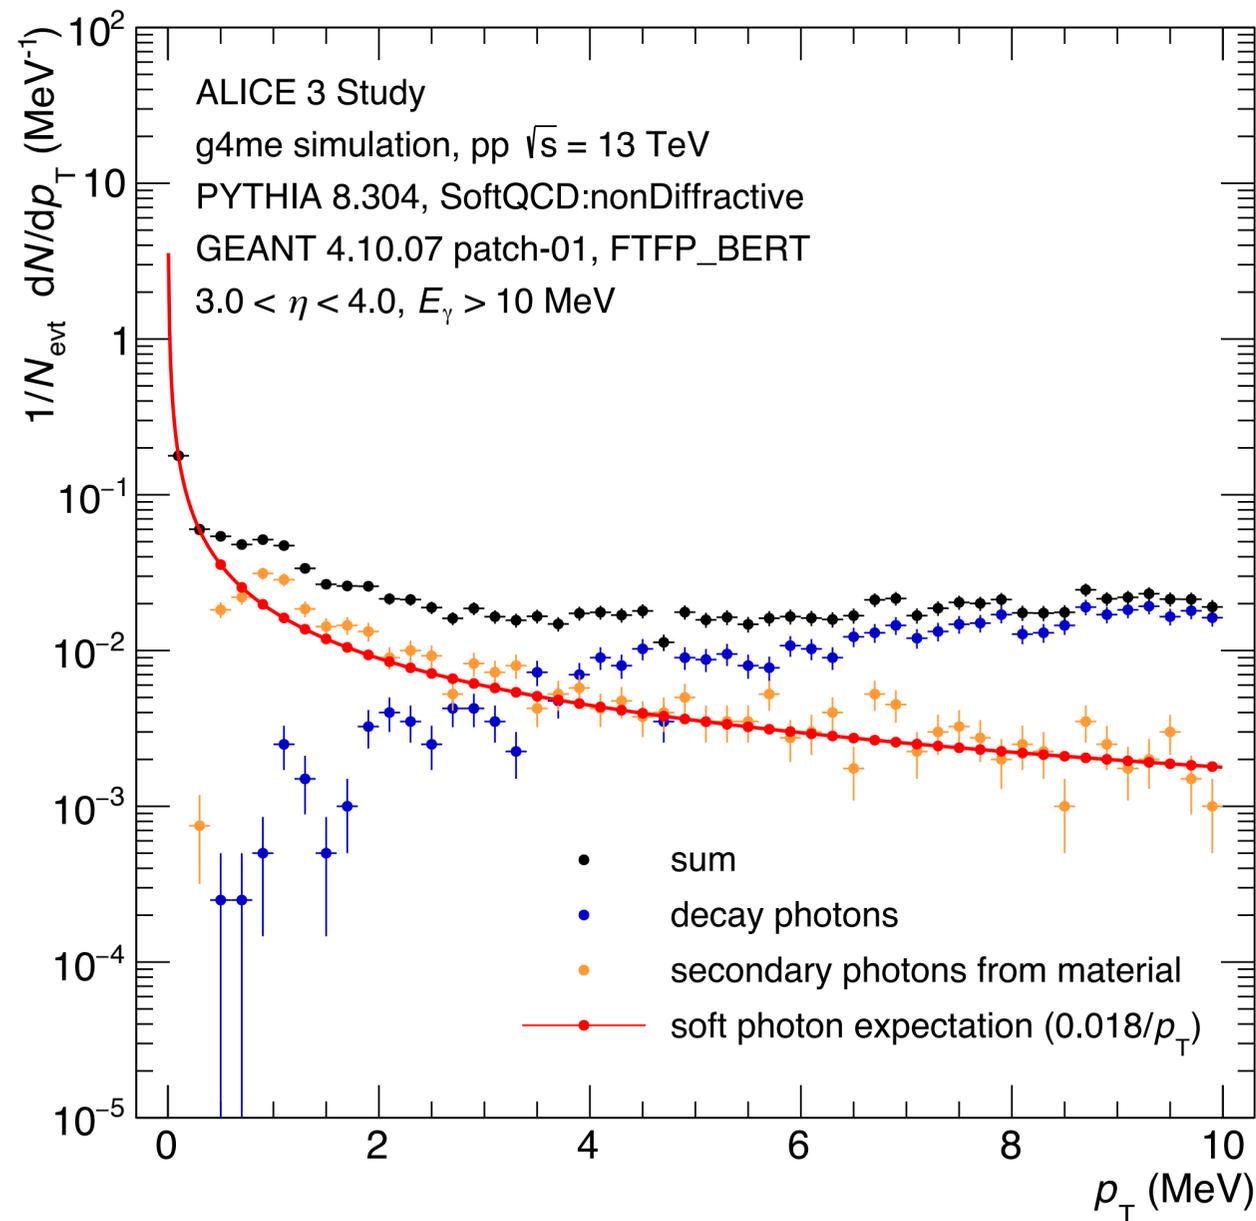

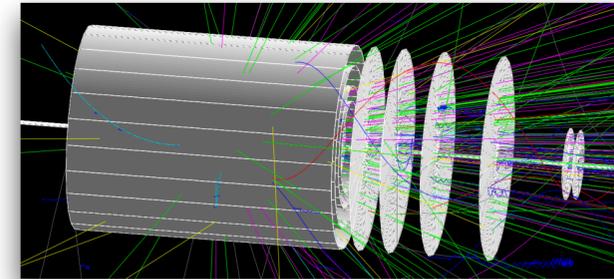

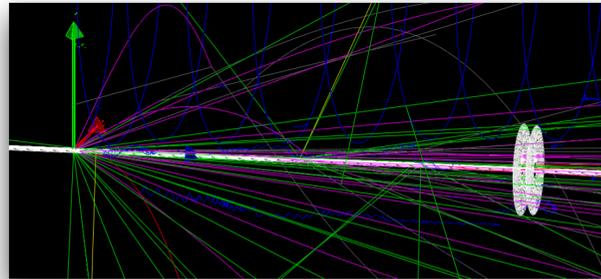

comparison of background for two scenarios:

1. only beam pipe

2. full geometry

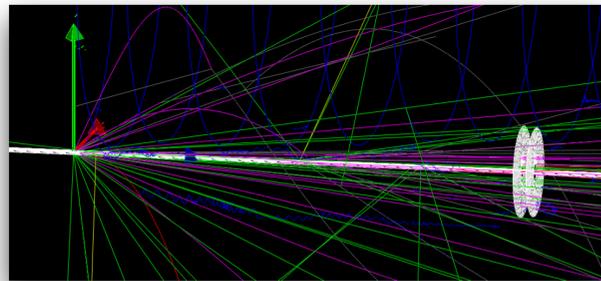

$3 < \eta < 4$

yield

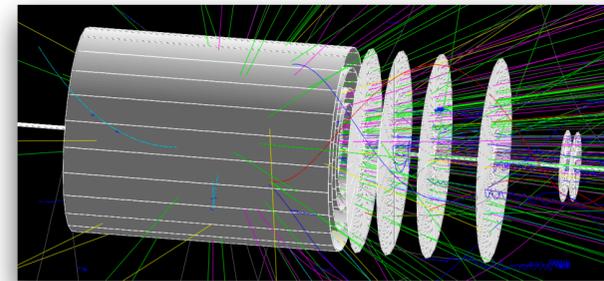

comparison of background for two scenarios:

1. only beam pipe

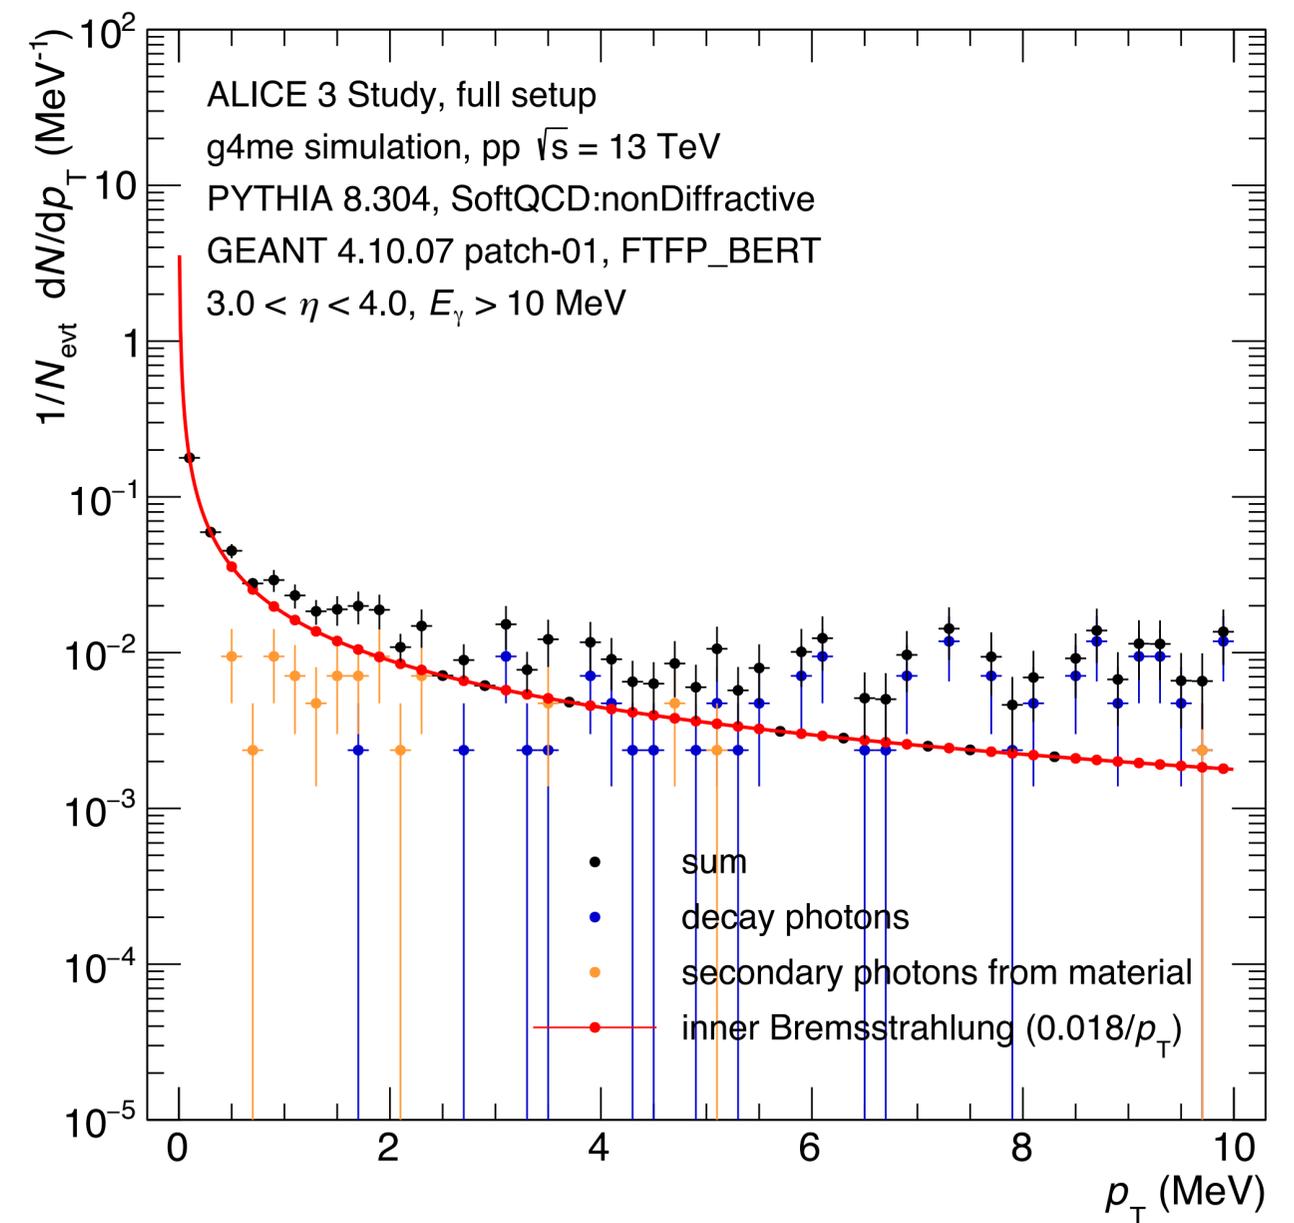

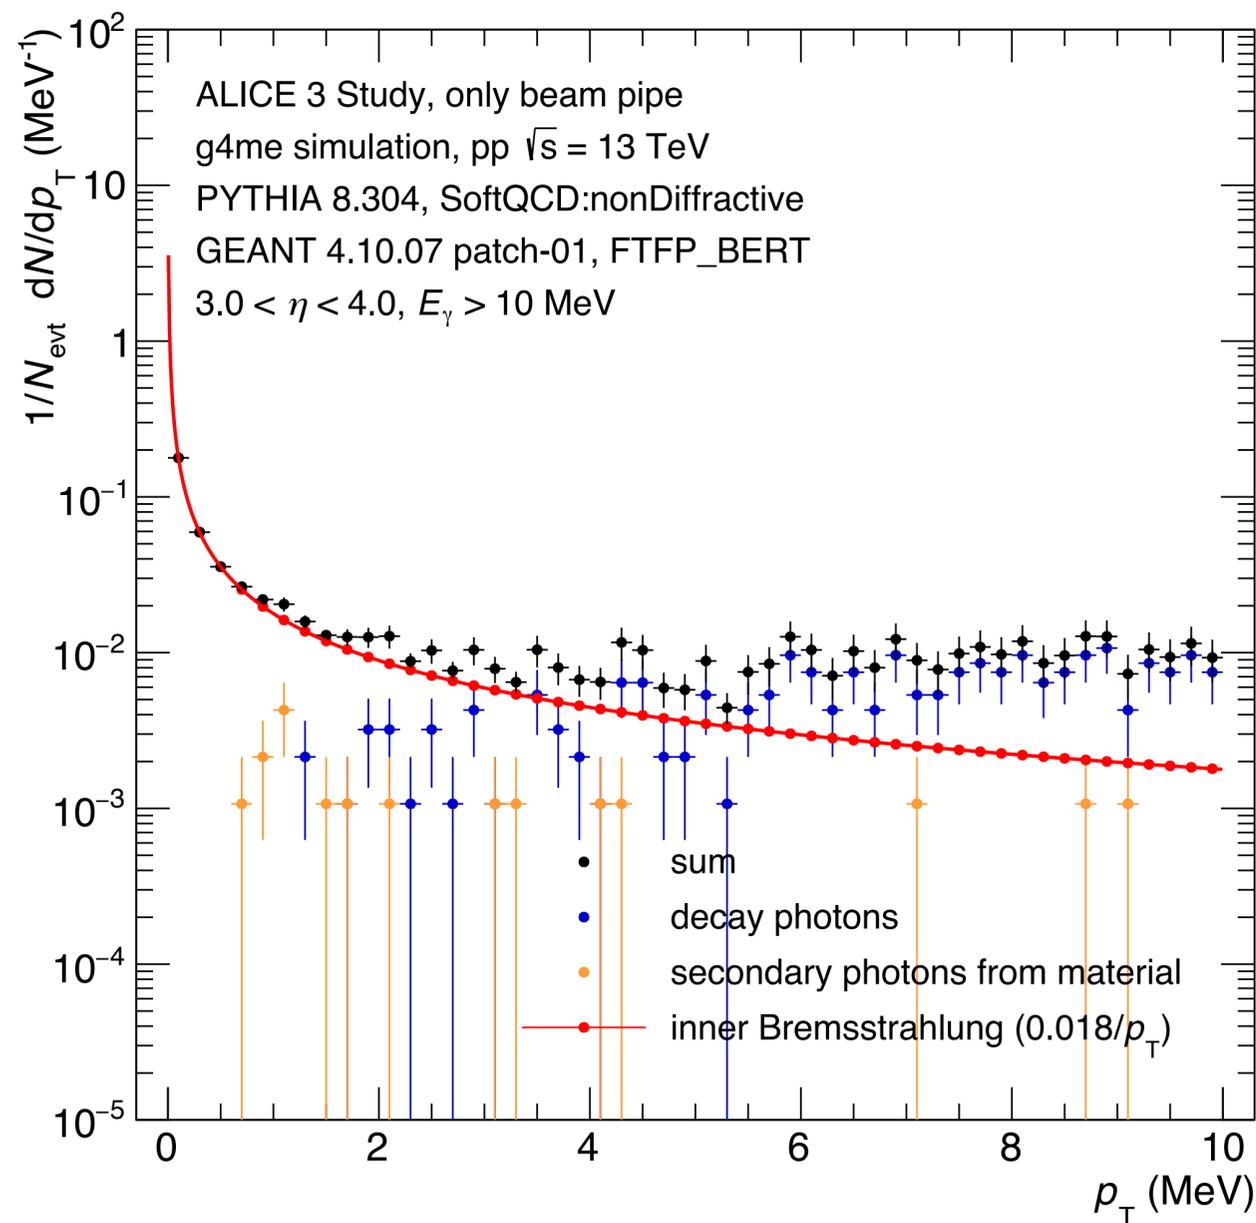

2. full geometry

$3 < \eta < 4$

yield

with
electron
veto

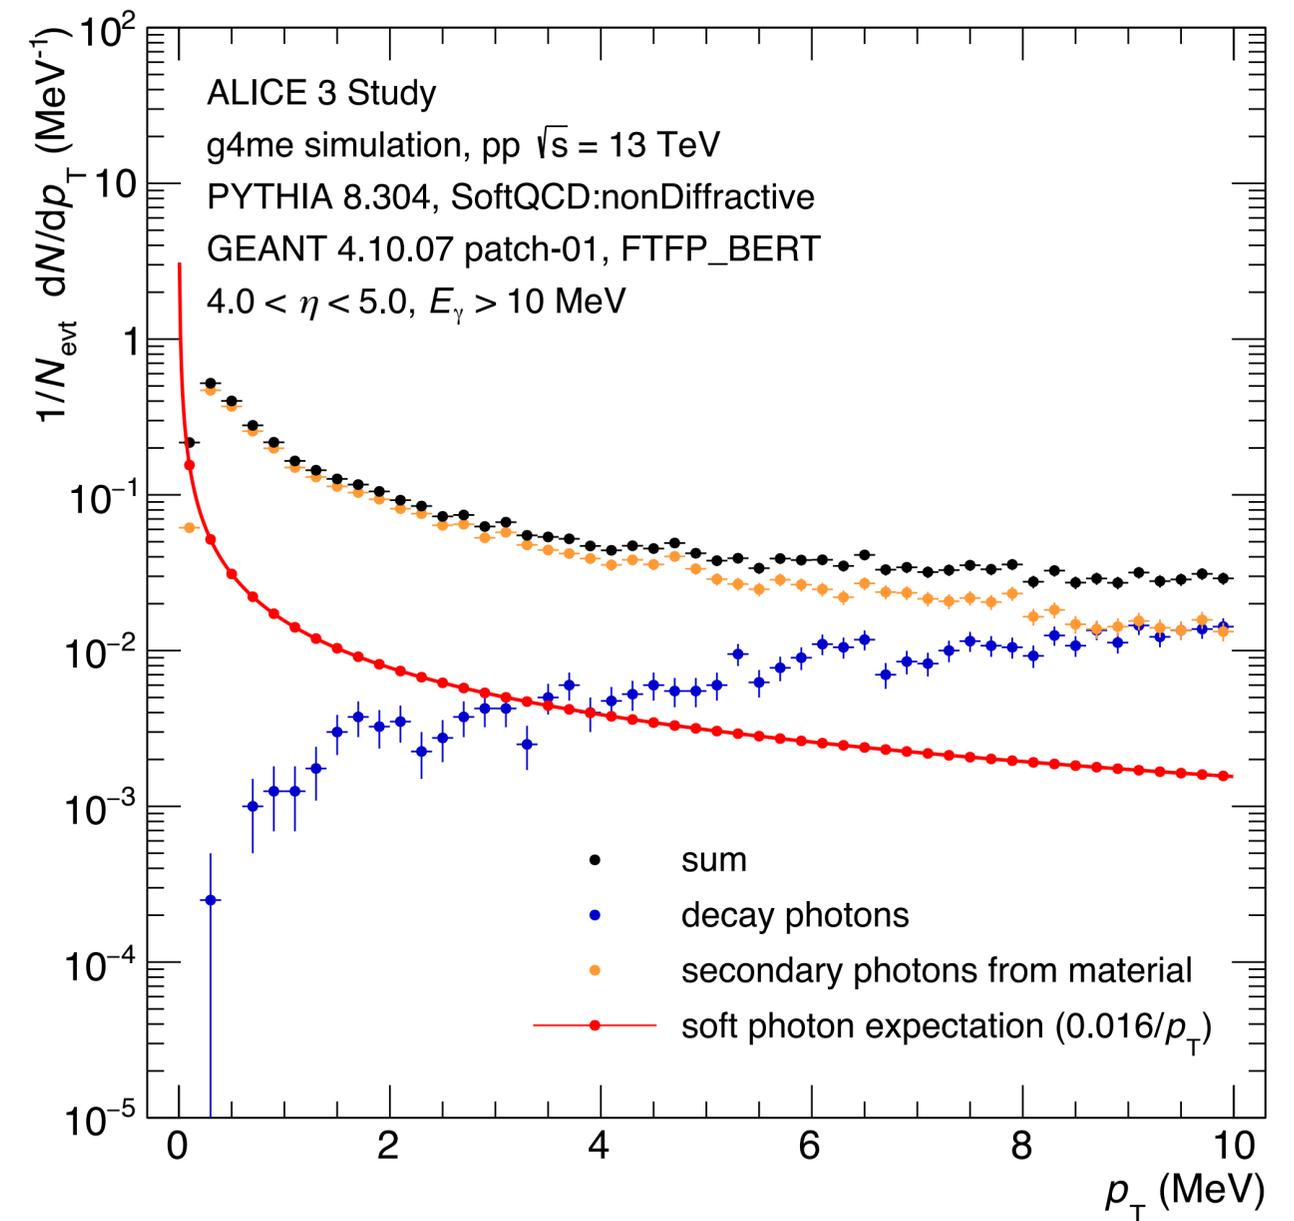

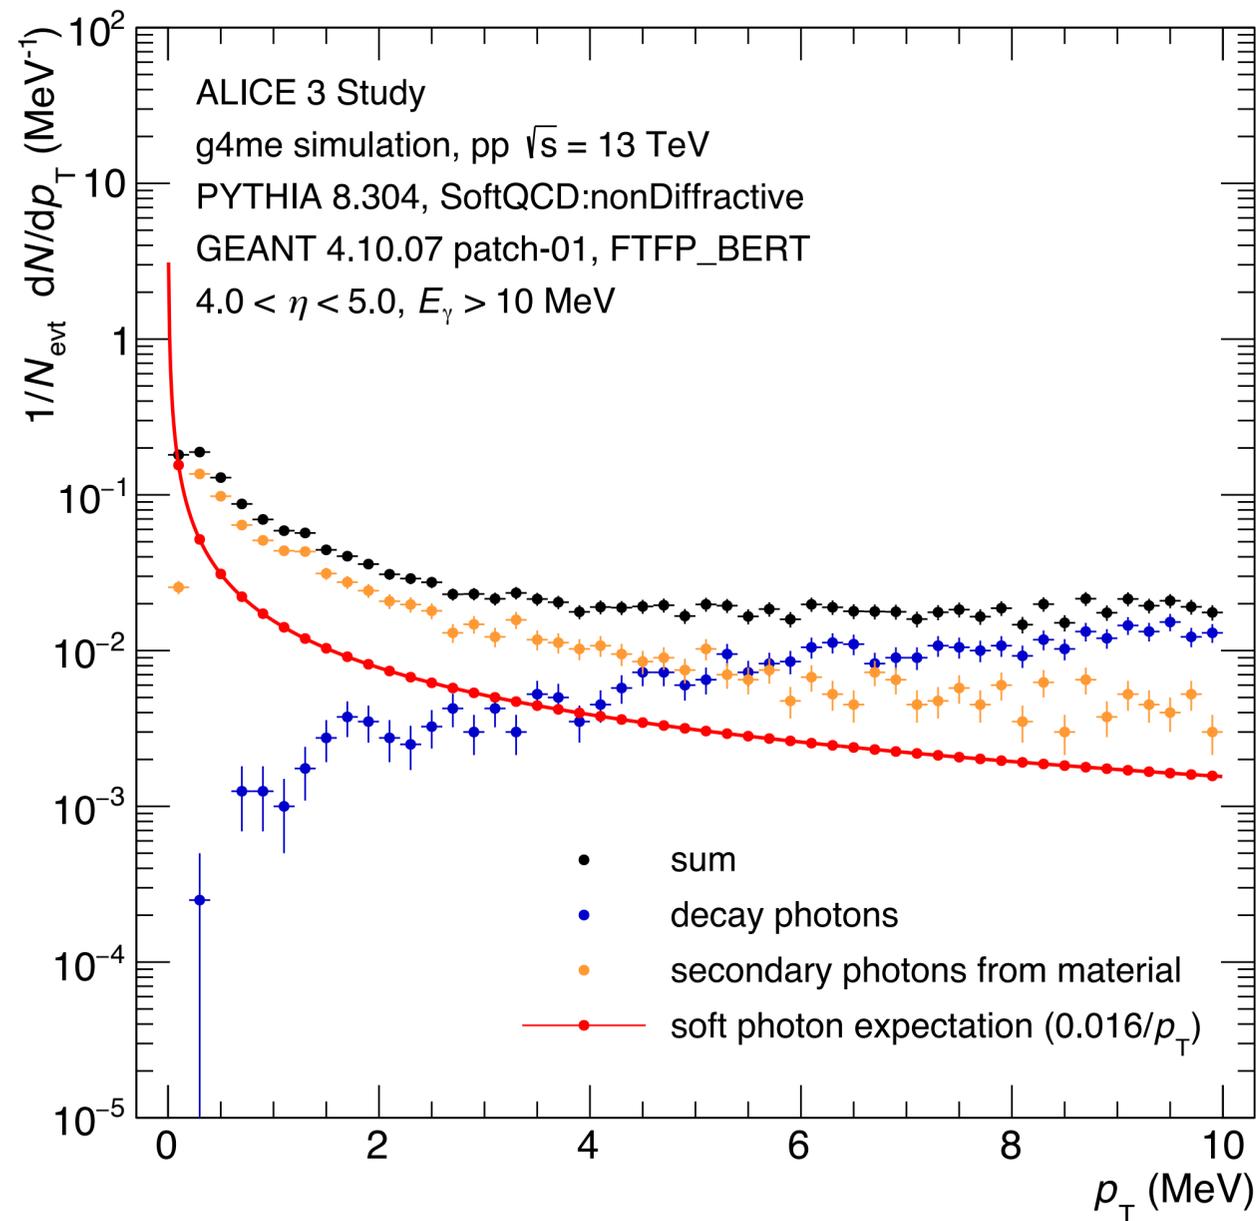

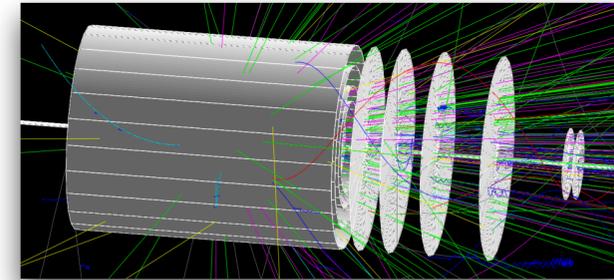

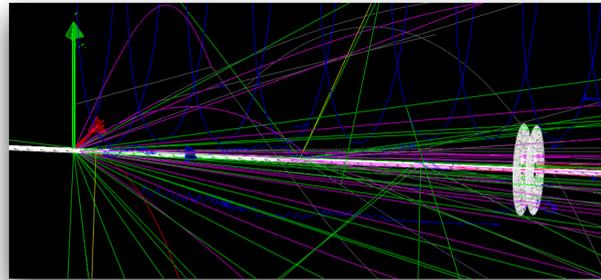

comparison of background for two scenarios:

1. only beam pipe

2. full geometry

$4 < \eta < 5$

yield
